Interaction Design

Assessment 1: Ethical Conduct in Design

Due Date: 29th August 2024, 15:00 via the Blackboard site
Weighting: 20%
Individual Work

Description:

Ethical conduct is central to any design project. As a part of this assessment, students are asked to prepare a proposal of their design projects following ethical insights. Students will write a report of ~1500 words, which will consist of identifying ethical issues in their design projects and subsequent decisions taken; identifying and integrating specific ethical principles in their projects and critiquing overall impact their project could have on the society.

Learning Objectives:

1. Apply ethical conduct and critical thinking in design projects.
2. Learn conventions on searching, reviewing and referring peer-reviewed work on ethics

Deliverable:

A project proposal focused on ethical conduct in design projects. It is expected that the report will be around 1500 words. You should use APA referencing format. You must acknowledge if you use generative AI tools (e.g. ChatGPT), along with a complete list of prompts, in English.

Report Contents:

Your report should contain the following

- **Project Description (30%):** A description of the design project, clearly indicating the problem space, overall settings and information about the users involved in the space. Describe specific phases of your project (e.g. user research, prototyping, evaluating).
- **Ethical Issues (30%):** Identify and prepare a list of potential and imminent ethical issues in your project. Describe your action plan to deal with these issues. A table should be prepared for this section.
- **Principles of Ethics (30%):** Identify and discuss specific ethical principles that your project utilises. Add a brief discussion on the impact of your design on the society. You will need to cite appropriate literature.
- **Language & Presentation (10%):** Clear and concise writing with minimal grammar issues.

Detailed Assessment Criteria

Criteria Points	7 – High Distinction	6 – Distinction	5 – Credit	4 – Borderline Pass	3 or Less – Fail
Project Description **30%**	Report summarises the project in an excellent manner Clearly identifies and describes the main phases of the project	Report summarises the project well but lacks depth in describing the problem space, overall settings and users Clearly identifies and describes the main phases of the project	Report summarises the project well but lacks depth in describing the problem space, overall settings and users Main phases of the project are not described sufficiently	The project is not adequately described and needs more clarity A clear lack in describing the main phases of the project	No or minimal effort in summarising the project A haphazard attempt
Ethical Issues **30%**	Outstanding evidence of identifying potential ethical issues; at least 5-8 ethical issues are identified Excellent action plan to deal with the identified ethical issues Overall, a great demonstration of understanding and handling ethical issues in design projects	Good evidence of identifying potential ethical issues; at least 5 ethical issues are identified A few points in the action plan needed clarification and justification Overall, the report demonstrates a good understanding and handling ethical issues in design projects	Not all the potential ethical issues are identified; less than 5 ethical issues are identified A several points in the action plan needed clarification and justification Overall, the report demonstrates a satisfactory-level of understanding ethical issues in design projects	Several misses in identifying ethical issues; only a few ethical issues are identified Action plan lacks important details Overall, the report demonstrates a very superficial level of understanding ethical issues in design projects	No or minimal effort in identifying and handling ethical issues in the design project A haphazard attempt
Principles of Ethics **30%**	Outstanding work on identifying and discussing ethical principles from external sources Excellent overview of the impact on society	Good work on identifying and discussing ethical principles from external sources Excellent overview of the impact on society	Report presents a few identified principles on ethics; however, these are not adequately discussed A limited overview of the impact on society	Report lacks clearly identified principles on ethics Impact on the society is not well articulated	No external references were used No or insufficient discussion on the societal impact

	5-8 sources on ethics cited and discussed in sufficient details In-text citation and referencing were accurate	5-8 sources on ethics cited and discussed in sufficient details In-text citation and referencing were accurate	At least 5 sources on ethics cited and discussed in sufficient details In-text citation and referencing had quite a few errors	A few sources were used Work cited was not listed in references and/or had significant errors	Work cited was not listed in references and/or had significant errors
Language & Presentation **10%**	Writing is concise and points are well articulated Excellent, few or no grammatical or spelling mistakes	The paper is well organised, developing an argument and rooting this in evidence. Clear, some grammatical or spelling errors	There is a clear organisation to the paper, but may not always be logical or flowing Generally good, a few errors, inconsistent spellings	Evidence of organisation of the argument, but only adequately structured Poor, grammar sometimes makes meaning difficult to interpret, Inconsistent spelling or grammar	Little or no evidence of organisation, no logical development Falls far below the standard for submission and is frequently difficult to follow.
