1. **Positive Impact**

    a. Empowerment Education and Awareness Raising

    Integrating educational toolkits on social media platforms significantly reduces the occurrence and impact of pranks. Research shows that increased user awareness leads to more effective management of negative online interactions. (Vyawahare et al., 2024)

    b. Enhanced Reporting Mechanism

    Establishing a transparent reporting function enhances users' trust in the platform's response system. (Elsantil, 2020)

    c. Advanced Detection Algorithm Utilising advanced machine learning algorithms to identify, prevent, and mitigate pranks, reducing the workload of manual reviews and improving response times. (Ng et al., 2020)

2. **Success Criteria**

    a. Reduction in the Number of Reported Prank Incidents

    Aiming to reduce prank reports by at least 30% within the first year to measure the success of the project. This metric is verified by platform data reflecting the efficiency of new tools and educational content. (Vyawahare et al., 2024)

    b. Enhanced User Satisfaction and Sense of Security

    User survey results show an increase in satisfaction with platform security measures by at least 25%, indicating a significant reduction in the threat of pranks. (Elsantil, 2020)

    c. User Participation in Educational Tools

    At least half of the teenage users are expected to interact with the educational toolkit within the first six months of its launch, reflecting the effectiveness of the project in terms of educational outreach and impact. (Ng et al., 2020)

    d. Positive Feedback from Stakeholders

    Collecting at least 75% positive feedback from educators and parents on the resources and tools provided is also a major goal. This ensures that the solution meets the needs of key secondary stakeholders and effectively supports young people. (Lizut, 2019)
